SECTION 1

Logging In

Everything on your website — packages, destinations, blog posts, bookings, and your contact details — is managed from one place, built specifically to be simple to use: the **Manage** panel. You don't need any special software, just a web browser.

1. Open your web browser and go to: **https://successfulluxurysafaris.co.ke/manage/**
2. The first time, you'll be sent to a sign-in page. Enter the **username** and **password** given to you by your developer, then click **Sign In**.
3. You'll land straight on your Manage panel.

> **★ Tip**
>
> Bookmark **https://successfulluxurysafaris.co.ke/manage/** in your browser so you don't have to type it every time — once you're signed in, it'll take you straight there.
>
> Always make sure the address starts with **https://** — this means the connection is secure.

SECTION 2

Resetting a Forgotten Password

If you ever forget your password, you can reset it yourself without contacting your developer.

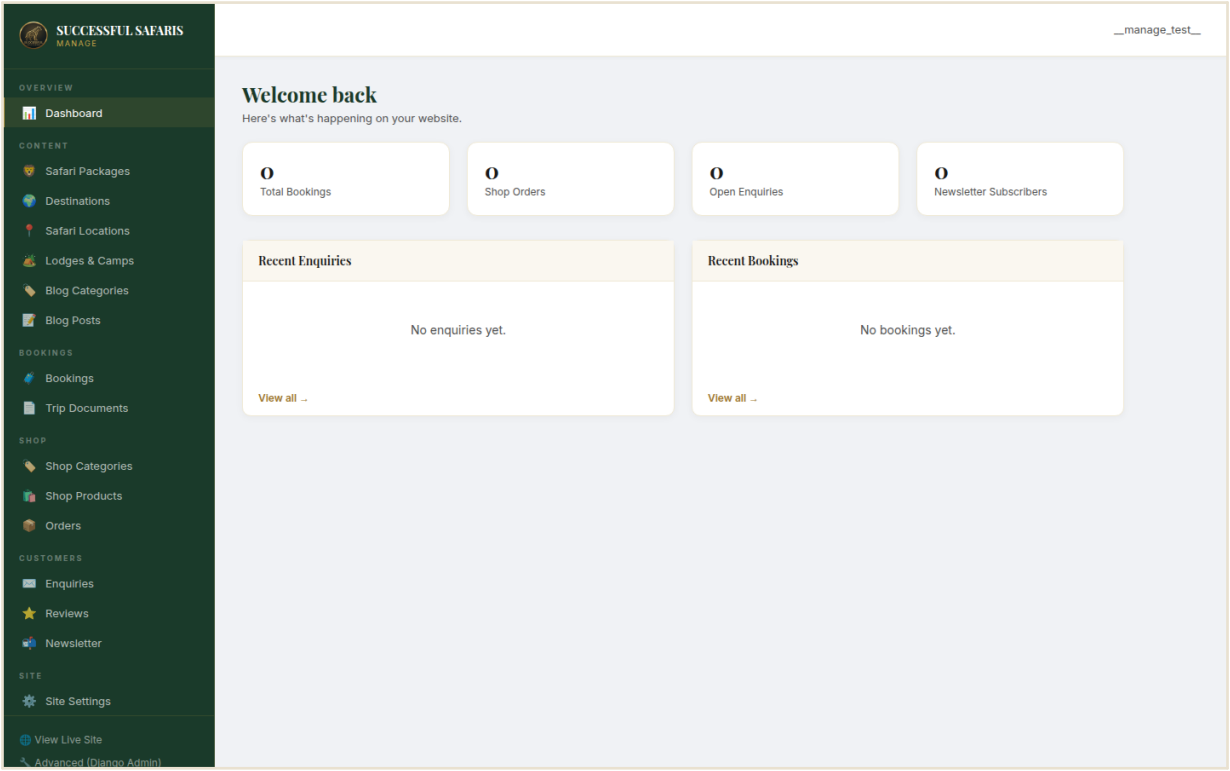

1. Go to **https://successfulluxurysafaris.co.ke/users/auth/** (the sign-in page).
2. Click **Forgot Password?**
3. Enter the email address linked to your account and click **Send Reset Link**.
4. Check your email inbox (and your Spam/Junk folder) for a message from the website.
5. Click the link in the email and choose a new password.

> ■ **Important**
>
> If the reset email never arrives, contact your developer — it usually means the website's email sending isn't fully configured yet.

SECTION 3

Finding Your Way Around

After signing in, you'll see your **Dashboard** — a quick snapshot of bookings, orders, and enquiries. Everything else is reached from the dark green menu on the left, grouped into Content, Bookings, Shop, Customers, and Site.

The Dashboard, with the menu on the left and a quick overview on the right.

For any list in the menu (Packages, Destinations, Blog Posts, etc.), the same basic actions apply:

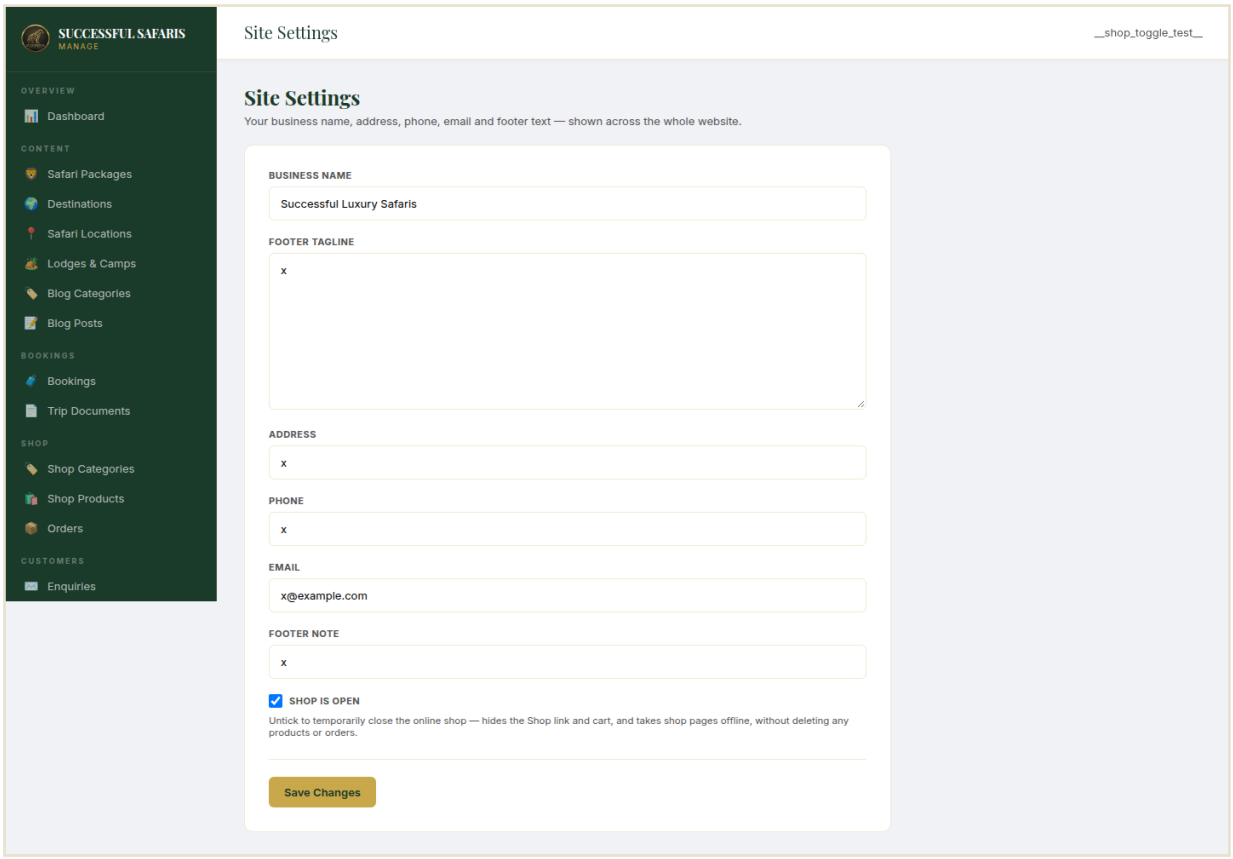

- **To add something new:** click the gold **"+ Add New"** button at the top of the list.
- **To edit something:** click **"Edit"** next to it in the list.
- **To save your changes:** scroll to the bottom of the form and click **"Save"**.
- **To delete something:** click **"Delete"** next to it, then confirm on the next page. You will always be asked to confirm before anything is actually removed.

> **★ Tip**
>
> Every list has a search box at the top — use it to quickly find a specific package, destination, or blog post instead of scrolling.
>
> There's also an **"Advanced (Django Admin)"** link at the bottom of the menu. That's a more technical screen meant for your developer — you shouldn't need it for everyday work.

SECTION 4

Editing Your Contact Details (Site Settings)

Your business name, address, phone number, email, and the small text shown at the very bottom of every page (the footer) are all controlled from one page — **Site Settings**, under the **Site** section of the menu. This is the page you'll use most often for quick updates.

Site Settings — one simple form, no list to navigate.

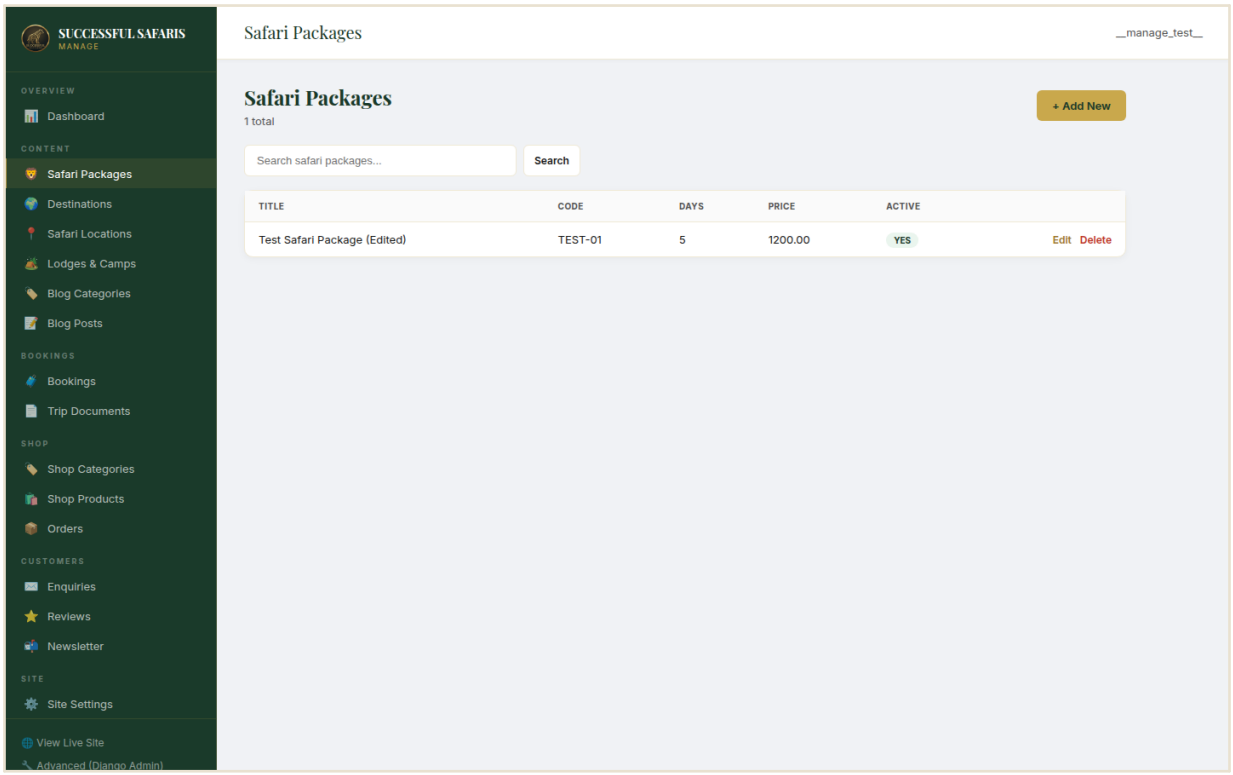

Business Name	The company name shown around the site.
Footer Tagline	The short description under the logo in the footer.
Address	Your physical address, shown in the footer and on the Contact page.
Phone	Your contact phone number, shown in the footer and Contact page (also made clickable to call).
Email	Your contact email, shown in the footer and Contact page (also made clickable to email).
Footer Note	The small copyright line at the very bottom of every page.
Shop Is Open	Untick this to temporarily close the online shop — the Shop link and cart disappear from the website, and shop pages go offline. Nothing is deleted; tick it again any time to reopen exactly as it was.

Update any field and click **Save Changes** — it appears on the live website immediately.

SECTION 5

Managing Safari Packages

Packages are the safari trips customers can browse and book on your website. Find them under **Content → Safari Packages** in the menu.

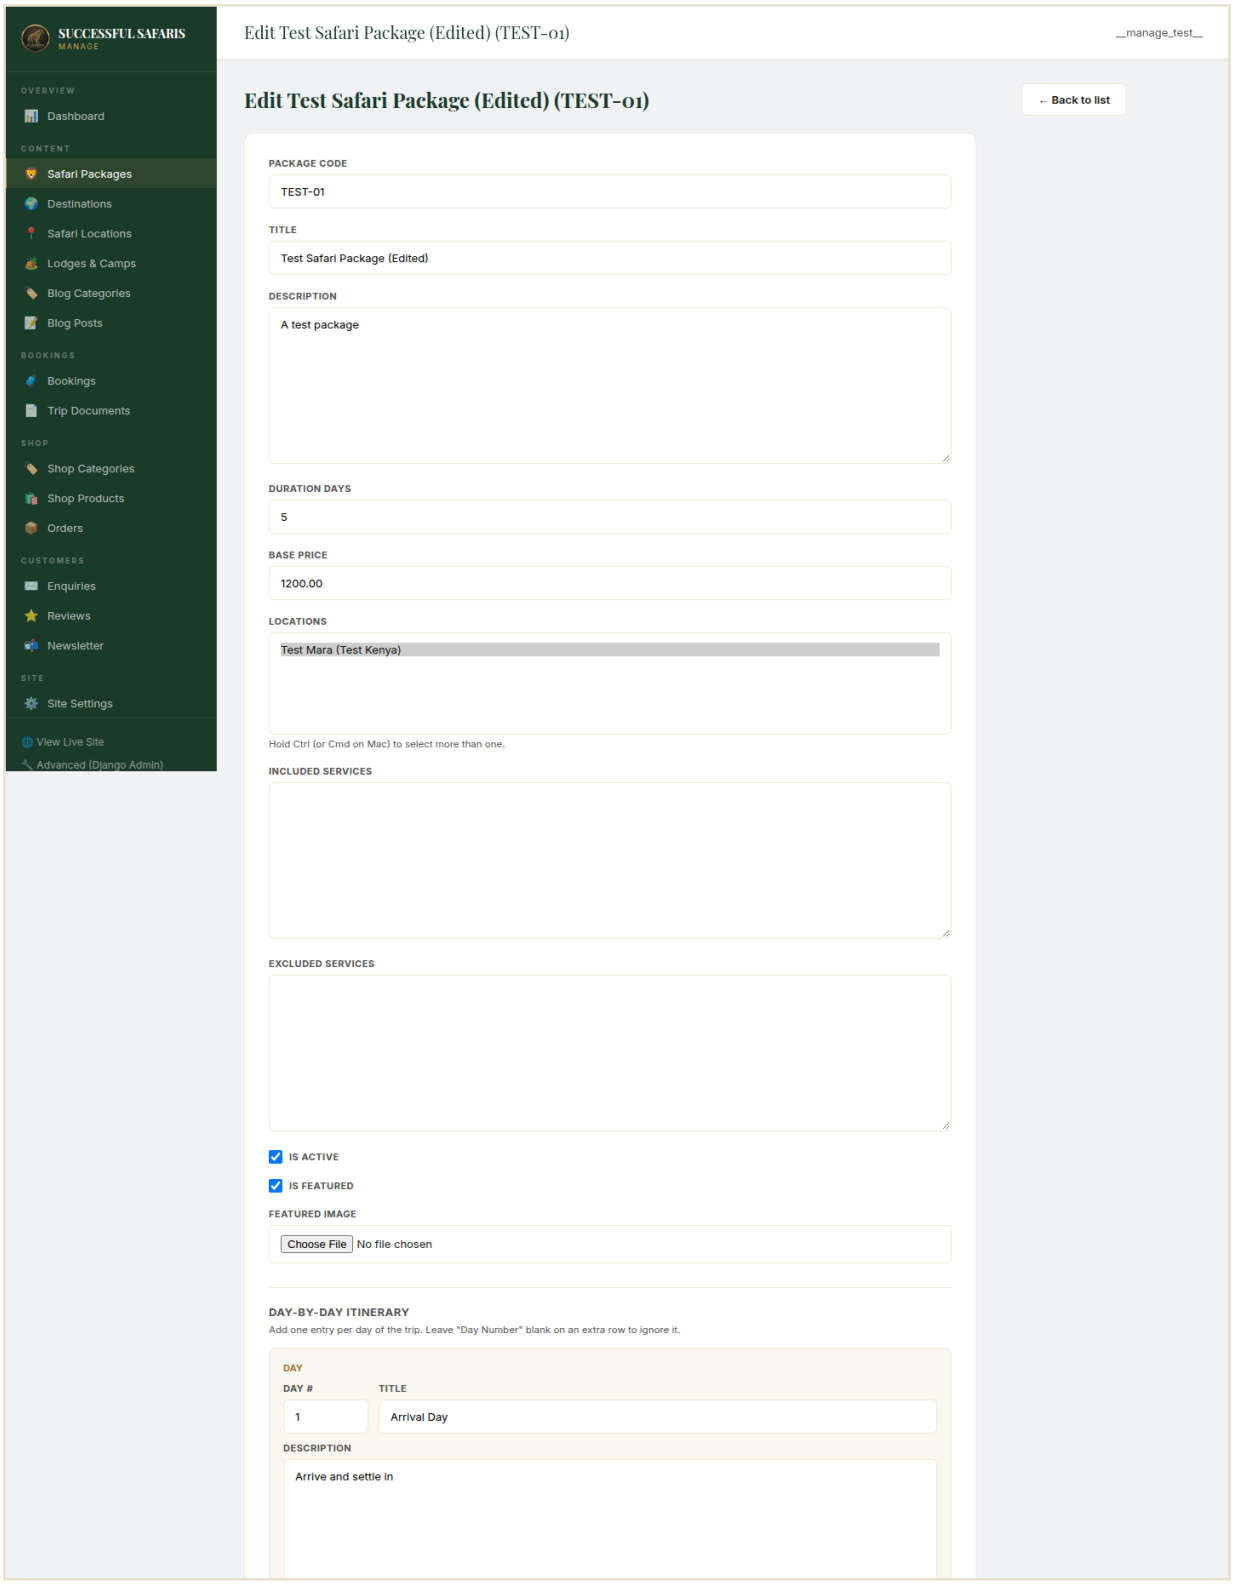

The Safari Packages list — search, Add New, Edit and Delete all in one place.

To add a new package:

1. Click **+ Add New**.
2. Fill in the details (see table below).
3. Scroll down to **Day-by-Day Itinerary** and fill in one box per day of the trip, describing what happens that day. An extra blank box is always ready for one more day.
4. Click **Save Package**.

Package Code	A short unique reference, e.g. KEN-07. Must be different for every package.
Title	The package name shown to customers.
Description	The main description shown on the package page.
Duration (days)	How many days the trip lasts.
Base Price	The starting price in your site's currency.
Locations	Which destinations/locations this package visits. Hold Ctrl (or Cmd on Mac) to pick more than one.

Included / Excluded Services	What's covered in the price, and what isn't.
Is Active	Untick this to hide the package from the website without deleting it.
Is Featured	Tick this to highlight the package on the homepage.
Featured Image	The main photo for this package. Use clear, high-quality landscape photos.

The Package form, with the Day-by-Day Itinerary builder at the bottom.

> **★ Tip**
>
> To temporarily hide a package (e.g. fully booked, or being updated), untick **Is Active** instead of deleting it. You can always tick it again later.

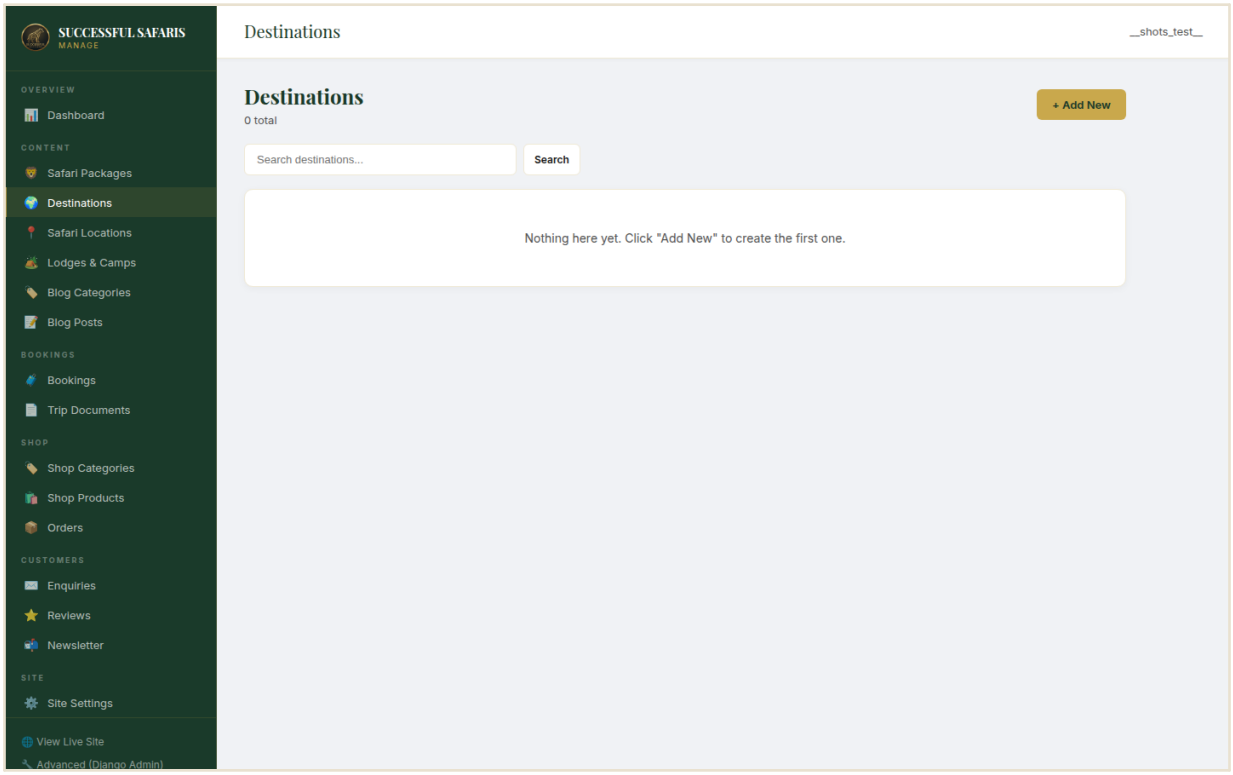

SECTION 6

Managing Destinations, Locations & Lodges

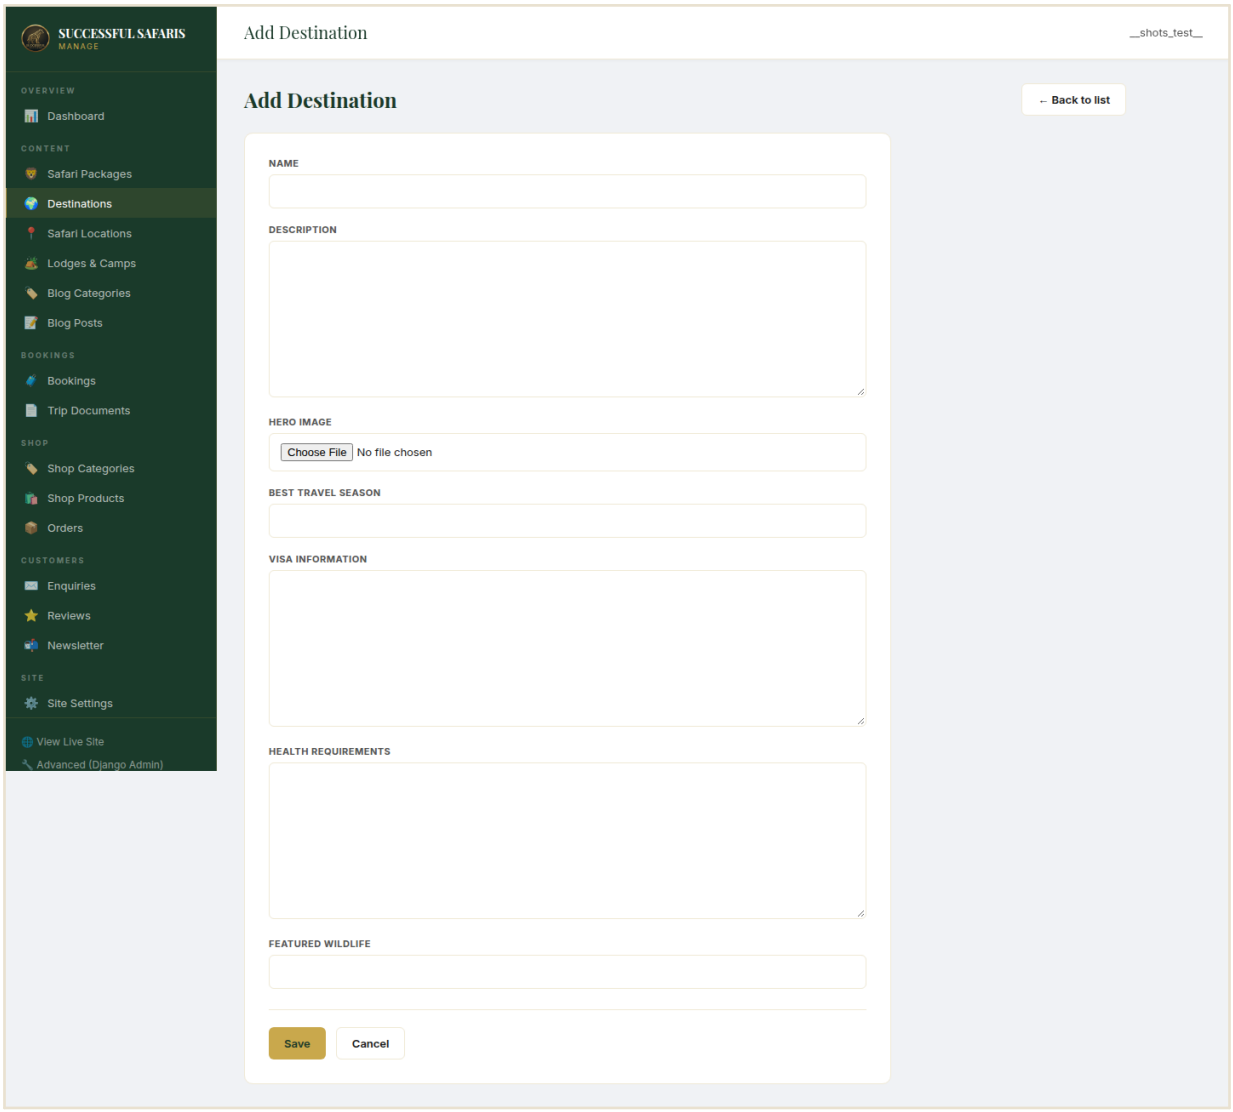

These three connect to each other like a tree, from broad to specific, and each has its own entry under **Content** in the menu:

- **Destination** — a country or region, e.g. “Kenya”.
- **Safari Location** — a specific place within a destination, e.g. “Masai Mara”.
- **Lodges & Camps** — a specific lodge, camp, or hotel within a location.

Each one must be linked to its parent when you create it — for example, every Safari Location must be assigned to a Destination.

The Destinations list.

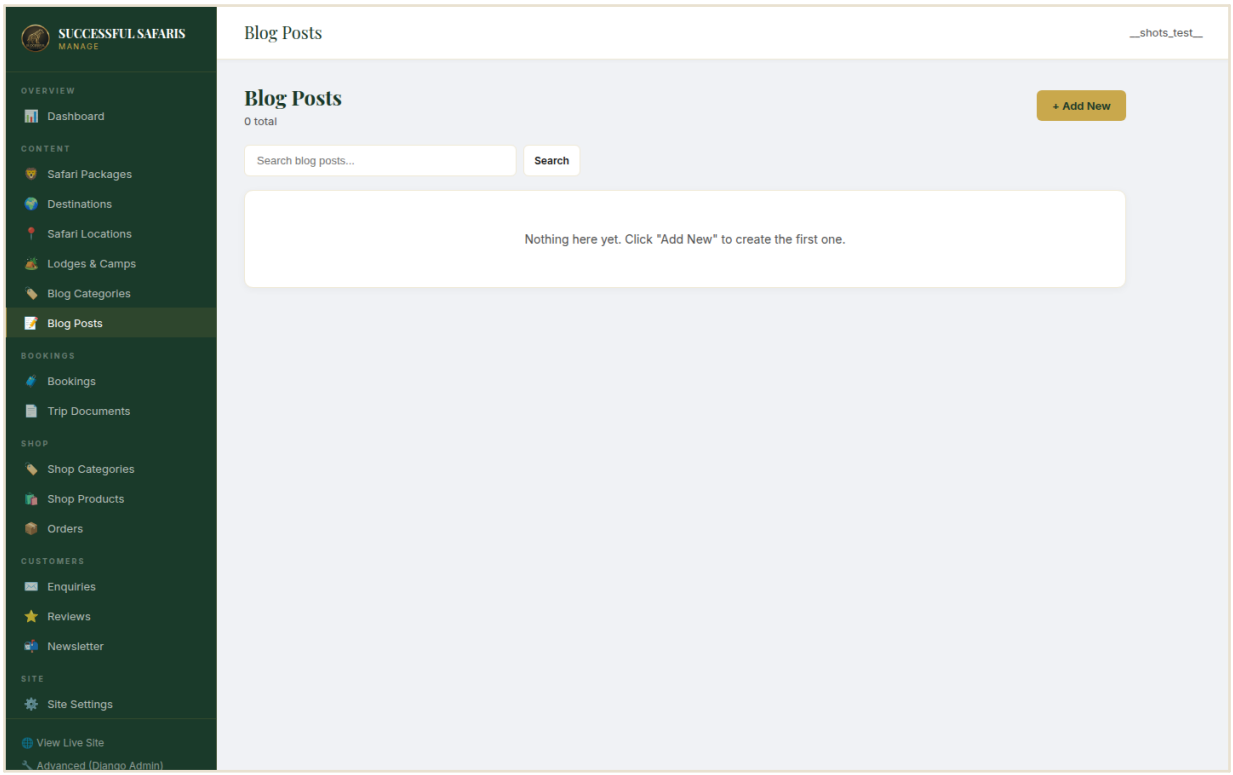

Adding a new Destination.

Name	The display name, e.g. “Masai Mara National Reserve”.
Description	The descriptive text shown on the page.
Hero / Featured Image	The main large photo for this item.
Best Travel Season	(Destinations only) e.g. “July – October for the wildebeest migration”.
Type	(Lodges & Camps only) Lodge, Tented Camp, Private Villa, or Hotel.
Nightly Rate	(Lodges & Camps only) The price per night.

SECTION 7

Managing the Blog

Blog posts appear on your Safari Journal page and help attract new visitors through search engines. Find them under **Content** → **Blog Posts**.

The Blog Posts list.

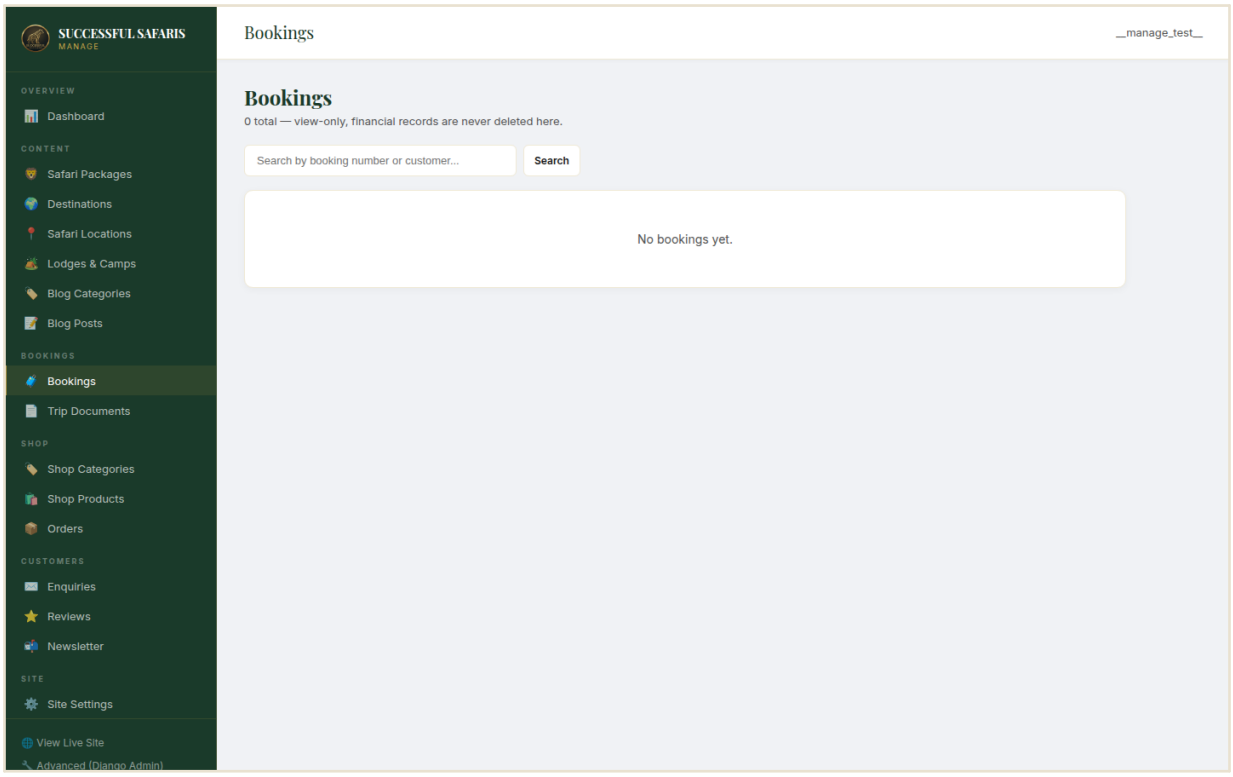

1. Click **+ Add New**.
2. Write a Title and the main Content.
3. Choose a Category (create a new one first under **Content** → **Blog Categories** if needed).
4. Tick **Is Published** when you're ready for it to go live — leave it unticked to save a draft without publishing it yet.
5. Click **Save**.

> **★ Tip**
>
> Leaving **Is Published** unticked is a safe way to prepare posts in advance and publish them exactly when you're ready.

SECTION 8

Viewing Bookings & Payments

Go to **Bookings** in the menu to see every booking made by customers.

The Bookings list.

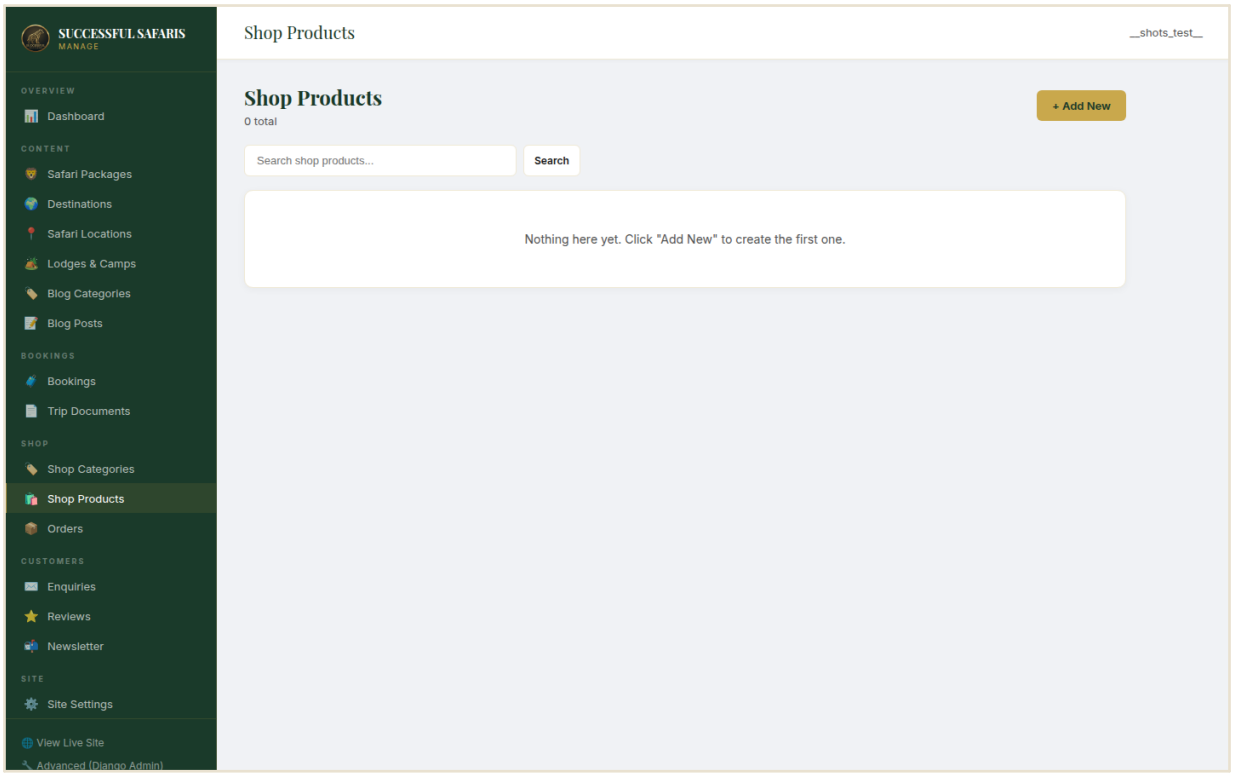

- Click **View** on a booking to see its travelers, payments, and current status.
- Use the **Update Status** box on that page to change where a booking is up to (e.g. Pending, Confirmed, Cancelled).
- Use the search box to quickly find a booking by its booking number or customer name.

> **■ Be Careful**
>
> Bookings and payments can't be deleted from here on purpose — these are financial records. If a booking genuinely needs to be cancelled, change its **Status** instead, so the history is kept.

SECTION 9

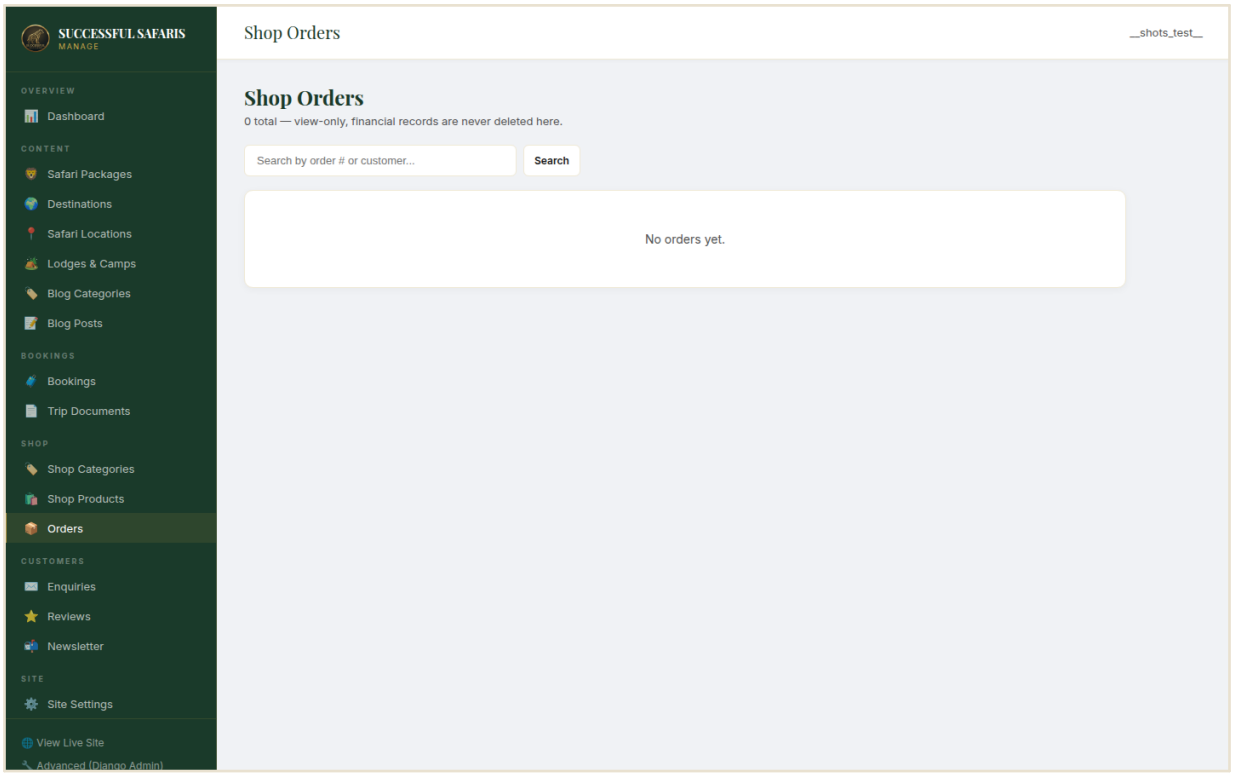

Managing Shop Products & Orders

If you sell safari gear or add-on products, these are managed under the **Shop** section of the menu.

The Shop Products list.

Shop Categories	Groups of products, e.g. “Clothing”, “Luxury Add-ons”.
Shop Products	Individual items — set the Name, SKU (a unique code), Price, and Stock Quantity. Untick “Is Active” to hide a product without deleting it.

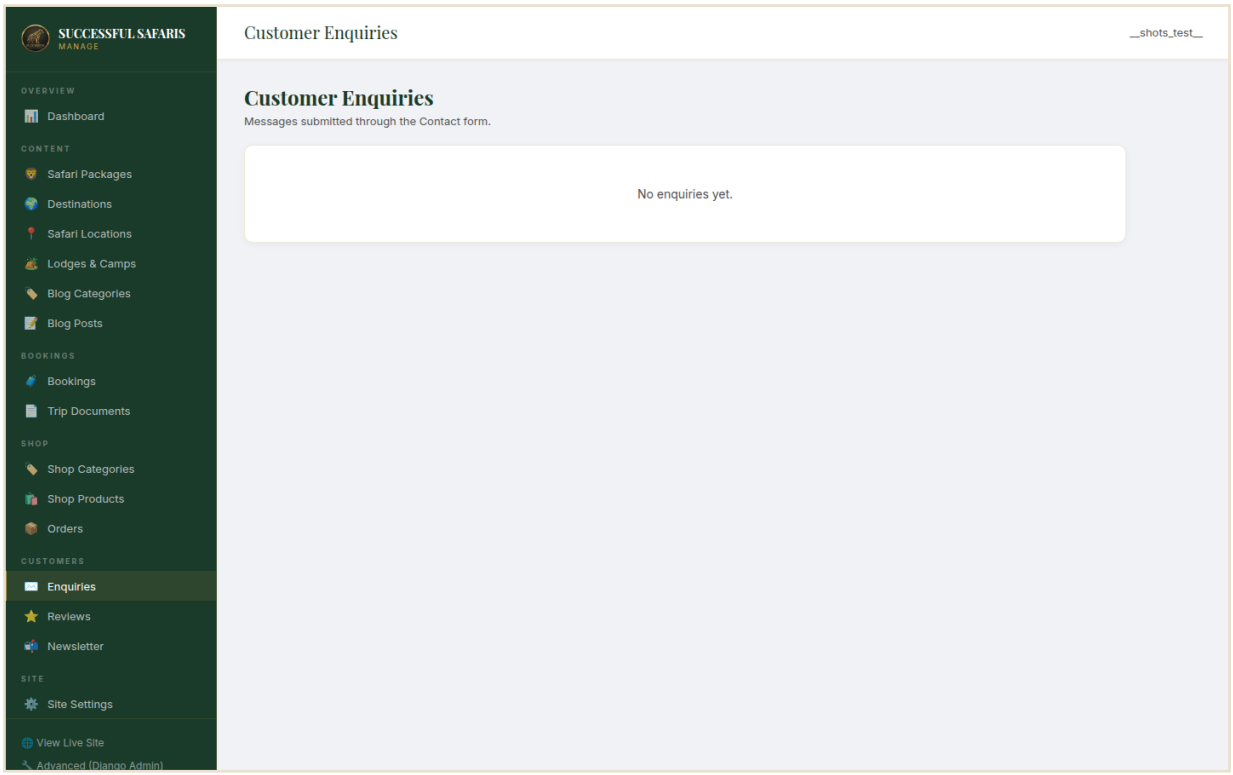

The Orders list — click View to see items and update status, same as Bookings.

SECTION 10

Customer Enquiries & Reviews

When a customer submits the Contact form, it appears under **Customers** → **Enquiries**. Click **Mark Resolved** once you've replied to the customer by email or phone.

The Enquiries list, with a one-click Resolve button.

Customer reviews of packages appear under **Customers** → **Reviews**, where you can remove any that need moderating.

SECTION 11

Newsletter Subscribers

Everyone who signs up for your newsletter through the footer form appears under **Customers** → **Newsletter**. You can remove anyone who asks to be unsubscribed.

SECTION 12

Your Company Email

Your website's official email address, **info@successfulluxurysafaris.co.ke**, is a real mailbox — separate from any personal Gmail or Yahoo account — and it's already set up to automatically copy every email it receives to your personal inbox at **berylthesafarigirl@gmail.com**. You don't need to check two places; anything sent to the company email already lands in your own inbox too.

To log in directly to the company mailbox (webmail):

1. Go to **https://successfulluxurysafaris.co.ke:2096/**
2. Username: **info@successfulluxurysafaris.co.ke**
3. Password: the one your developer gave you when the mailbox was created (or the most recent one from a password reset — see Section 14).

> **★ Tip**
>
> You can also open webmail with one click from **https://successfulluxurysafaris.co.ke/manage/staff-emails/** → **Open Webmail**, once signed in to the Manage panel.

SECTION 13

Replying as Your Company Email, from Gmail

Because info@successfulluxurysafaris.co.ke already forwards to berylthesafarigirl@gmail.com, you'll see company emails in your personal Gmail automatically. The last piece is making sure that when you *reply*, it goes out looking like it came from the company — not your personal address. Gmail calls this **“Send mail as”**.

1. In Gmail (signed in as berylthesafarigirl@gmail.com), click the gear icon (top right) → **See all settings**.
2. Open the **Accounts and Import** tab.
3. Under **“Send mail as”**, click **Add another email address**.
4. Name: your business name. Email address: **info@successfulluxurysafaris.co.ke**. Leave “Treat as an alias” ticked, then click **Next Step**.

SMTP Server	mail.successfulluxurysafaris.co.ke
Port	587
Username	info@successfulluxurysafaris.co.ke
Password	The mailbox's password (see Section 12).
Secured connection	TLS

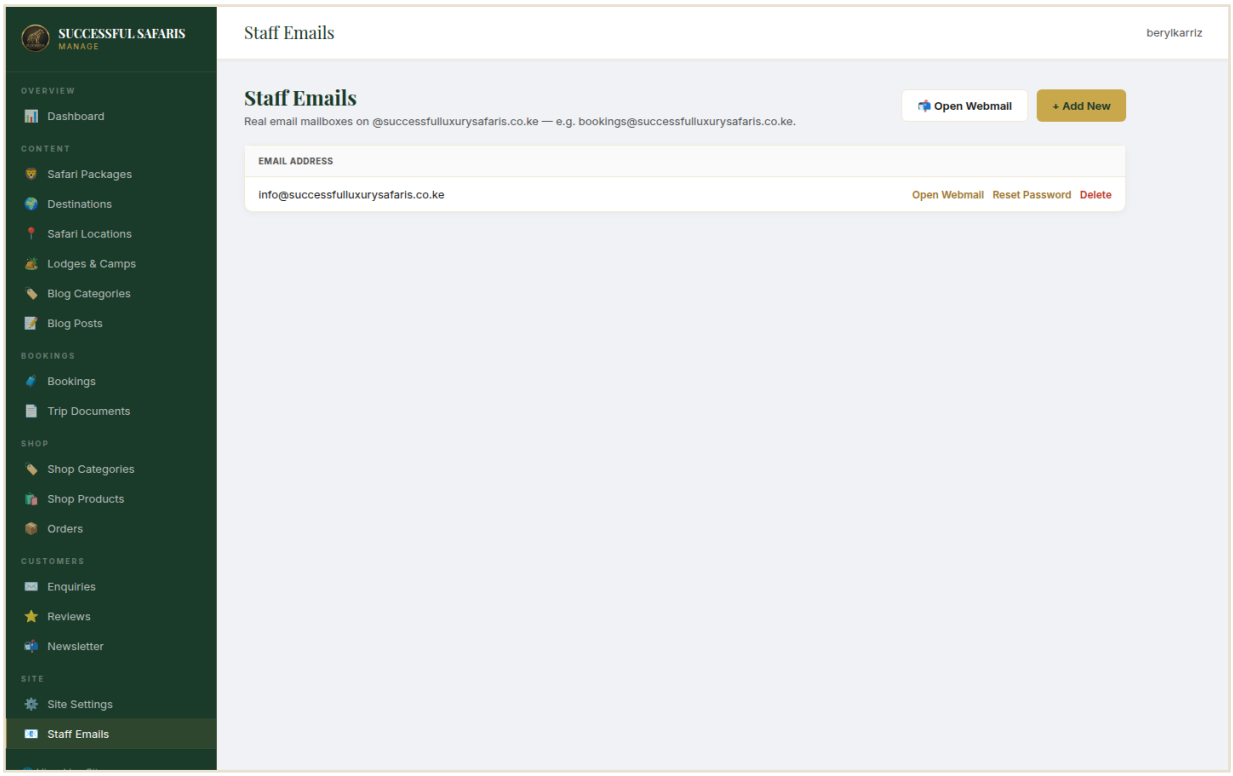

5. Click **Add Account**. Gmail sends a verification email to the company address to confirm you own it — since that mailbox forwards into this same Gmail account, the verification email will simply appear in your own inbox within a minute or two.
6. Open it, copy the confirmation code (or just click the verification link inside it), and confirm.

> **★ Tip**
>
> Back in **Accounts and Import**, tick **“When replying to a message, reply from the same address it was sent to”**. That way, replying to a forwarded company email automatically goes out as the company address — you don't have to remember to switch the “From” field yourself.
>
> To send a brand-new message as the company (not a reply), just use the **From** dropdown at the top of the compose window and pick the company address.

SECTION 14

Creating Email Accounts for Staff

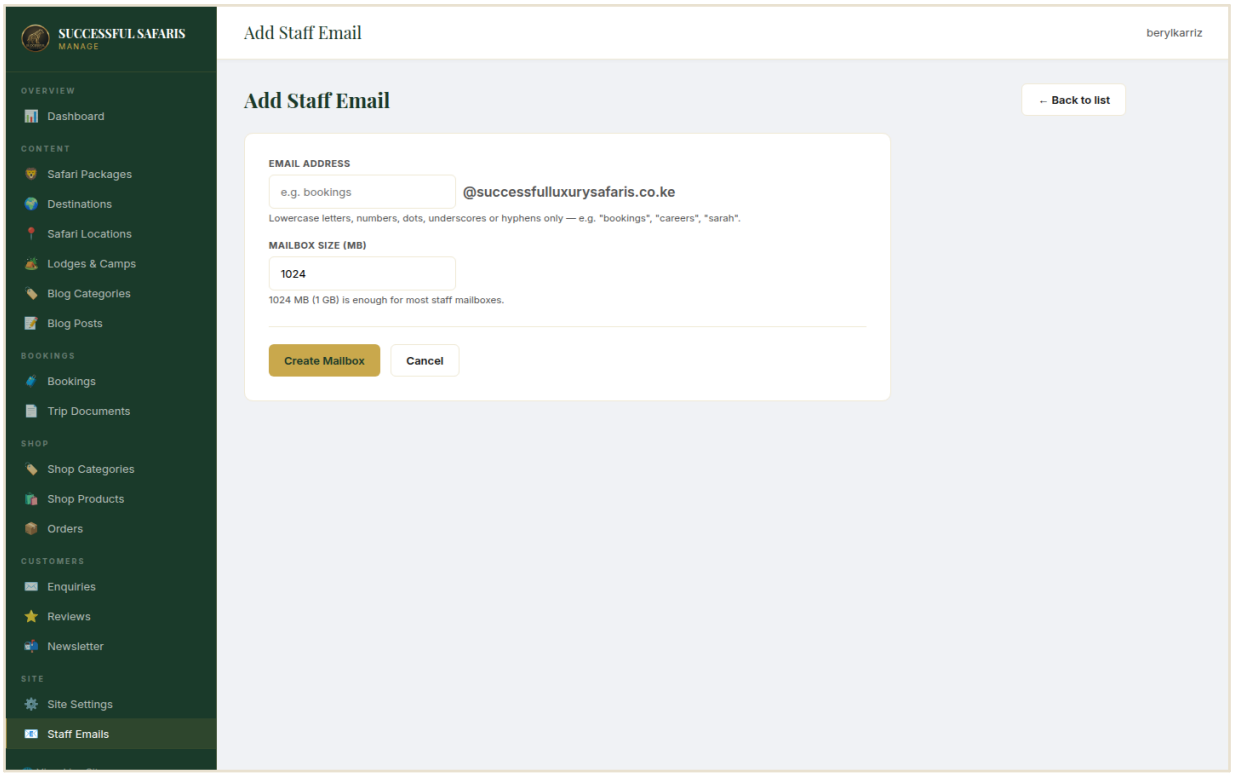

As the business grows, you can give staff their own @successfulluxurysafaris.co.ke email address — e.g. bookings@, careers@ — directly from the Manage panel, without needing separate hosting access. This is found under **Site** → **Staff Emails**, and is only visible to Super Admin accounts.

The Staff Emails list, with Open Webmail, Reset Password and Delete for each mailbox.

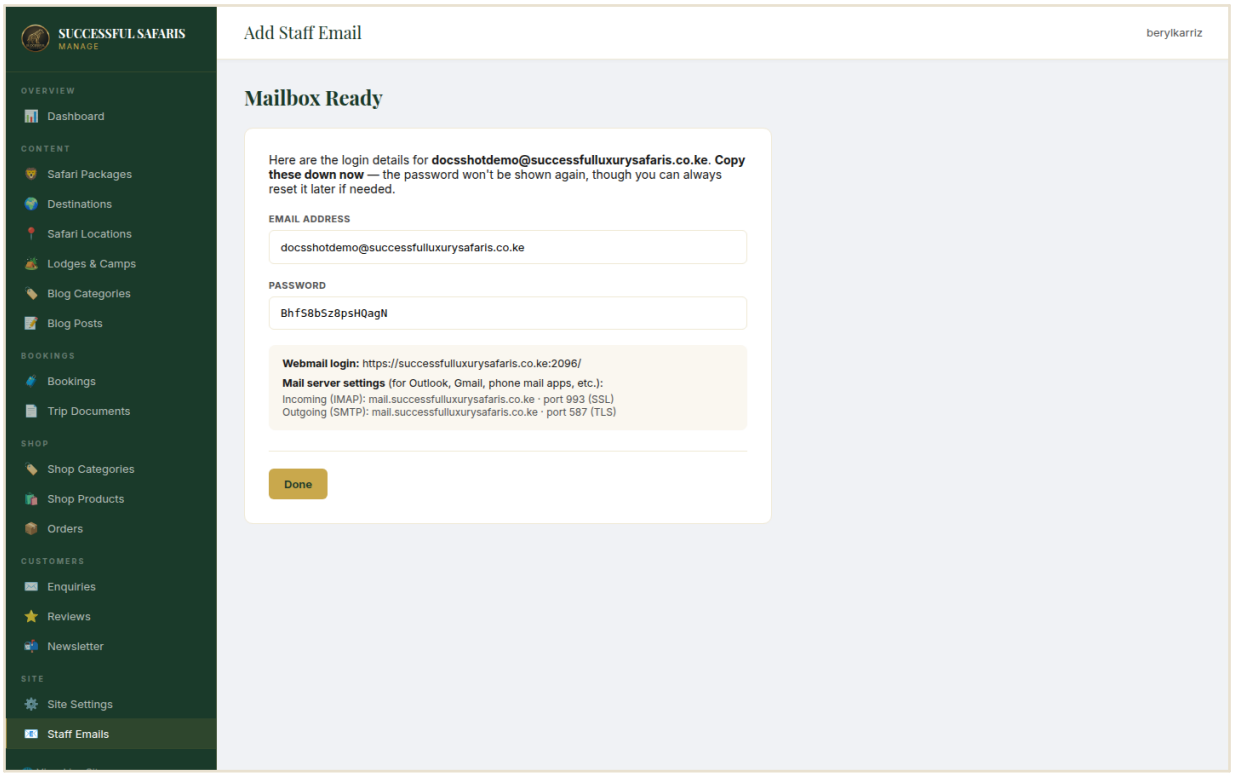

To create a new staff mailbox:

1. Click **+ Add New**.
2. Type a short name, e.g. “bookings” — it becomes bookings@successfulluxurysafaris.co.ke.
3. Leave the mailbox size at 1024 MB unless you know you need more.
4. Click **Create Mailbox**.

Adding a new staff mailbox — just a short name and a size.

A password is generated automatically and shown **once**, immediately after creation — copy it down right away and pass it to the staff member securely (in person or a private message, not a plain group chat). It can't be viewed again afterwards, but you can always generate a fresh one with **Reset Password**.

The one-time password reveal — copy this immediately.

■ Be Careful

Delete permanently removes the mailbox and everything in it — there's no undo. Only delete an account once you're sure the person no longer needs it.

SECTION 15

General Safety Tips

- **When in doubt, don't delete — deactivate.** Most lists have an “Is Active” or “Is Published” tick-box. Unticking it hides something from the website without permanently removing it, so you can always undo your decision later.
- **Deleting is permanent.** You'll always be asked to confirm before deleting — read that confirmation page carefully.
- **Use clear, correctly-sized photos.** Landscape (wider than tall) photos work best for featured images across the site.
- **Log out when you're done**, especially on a shared or public computer — click **Log Out** at the bottom of the menu.
- **Never share your password** over email, WhatsApp, or SMS. If you need to give someone else access, ask your developer to create them their own account instead.

SECTION 16

Getting Help

If something looks wrong, you're unsure about a change, or you need a feature this guide doesn't cover, reach out to your developer before making changes you're not sure about — it's always easier to fix something early than after it's been live for a while.

This guide covers the core day-to-day tasks. Your website may be updated over time with new features not yet described here.
